

NEW WASTE LEGISLATION MARCH 2025

WHAT IS THE CHANGE?

As of 31st March 2025, all local authorities and non-household premises in England will all be required to collect the same recyclable waste streams for recycling or composting. These streams are dry mixed recycling, food waste and residual non-recyclable waste, there is also an optional garden waste stream which can be charged for by councils and is not compulsory for businesses.

What's included in the waste streams?

- Dry Mixed Recycling - Glass, Metal, Plastics, Paper and Card.
- Food waste - Bones, Eggshells, Fruit & Veg Skins, Tea Bags and Coffee Ground.
- Residual Non-Recyclable - Everything Else.

WHY?

The purpose of this is to standardise recycling practices under the Environment act 2021 and to further increase the amount the waste which is recycled in the UK. Particularly the food waste collection will reduce the amount of food going to landfill where it releases harmful greenhouse gases. This will support achieving the Net Zero Strategy of eliminating biodegradable waste being sent to landfill from 2028. Instead, when collected separately they can be reprocessed to create organic fertiliser and biogas which can be used to generate electricity which will bolster the UK's energy security.

WHO'S AFFECTED

- All councils and Non-Domestic Premises Including:
 - Shops
 - Factories
 - Care Homes
 - Hotels
 - Prisons
 - Places of Worship
 - etc.

Summary of Implementation Dates for Businesses

31/03/2025: All Businesses Excluding Micro Businesses - Food and Dry Mixed Recycling

31/03/2027: All Micro Businesses*

*A company with fewer than 10 FTE employees. Measured per enterprise and not per site

OUR SOLUTIONS

ENQUIRE FOR PRICING

THE HYCLENZ CONTINUOUS SACK SYSTEM

The Hyclenz continuous bag system uses a special “endless” sack. It's as simple as fill, seal, cut, restart, saving up to 50% of your maintenance team's time changing sacks. When one bag is closed, the next is immediately ready to use!

The Hyclenz Continuous Sack Cabinets, available in two- or three-hole configurations, are designed for maximum efficiency. They feature separate, clearly labelled compartments to simplify waste sorting and ensure compliance. Built with durable, easy-to-clean materials, the cabinets are perfect for high-traffic areas, promoting hygiene alongside sustainability.

HYGIENE

No Contact With Waste!

EFFICIENCY

50% Less Time Changing Sacks

PRACTICALITY

Unrivalled Practicality

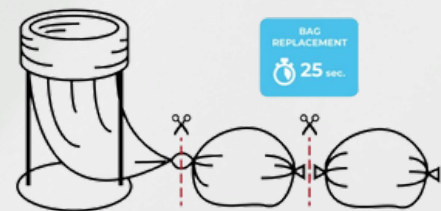

ECO-FRIENDLY

70% Less Plastic

LARGE

1 Meter = 5 Standard Sacks

FILL, SEAL, CUT, RESTART

PROCYCLE RECYCLING BINS

- Simplifies Waste Recycling
- Easy to Assemble
- Comes With Connector To Secure Bins Together
- Features 2 Slots To Secure Bags

SLIM JIM RECYCLING

- Effective Waste Segregation
- Built-In Venting Channels
- Easy Installation
- Integrated Bag Cinches
- Easy Cleaning
- Space-Efficient
